PROFESSIONAL SUMMARY

Data Analyst with 3 years of experience turning raw data into stories that drive decisions across multi-location franchise operations, financial services, and manufacturing. Skilled at turning abstract business questions into a series of SQL queries against relational data warehouses (Amazon Redshift), then presenting actionable insights through Tableau, Power BI, and Excel. Experienced in building and optimizing database views, leading independent root-cause analyses, and pairing quantitative data with qualitative user insights. Communicates comfortably with engineers and with non-technical stakeholders, and has supported 58 franchise partners with as-needed data requests.

EXPERIENCE

WOW1DAY Painting Inc. — Data Analyst Nov 2024 – Sep 2026

- Wrote and refactored 20 SQL views in Amazon Redshift, optimizing ETL logic and data models to improve query performance by 25%; partnered with data engineers on governance and documentation for a reliable, well-structured data warehouse.
- Built and maintained 25+ Tableau dashboards and recurring Salesforce reports, giving leadership self-serve KPI tracking that accelerated decision cycles by 20%.
- Combined Google Analytics web data, Invoca call-tracking data, and Salesforce CRM data to analyse the customer journey from first touch to booking, uncovering attribution and targeting insights that grew qualified lead volume by 10%.
- Acted as the go-to analyst for ad hoc database requests from 58 franchise partners, turning loosely defined questions into SQL queries and clear, decision-ready summaries; managed requests in Jira within Agile sprints, improving operational efficiency by 35%.
- Interpreted and defined data needs for franchise operations, marketing, and leadership, translating requirements into scalable automated reporting that cut manual reporting time by 35%.
- Led root-cause investigations into data discrepancies across Salesforce, Redshift, and Google Analytics, then cleansed and validated records — reducing reporting errors by 30% and improving data accessibility by 40%.

JP Morgan Chase & Co. — Business Analyst Jul 2021 – Aug 2022

- Designed and delivered Tableau dashboards and reports that turned raw portfolio data into clear, executive-ready visualizations for business and leadership stakeholders.
- Led independent research and financial analysis on 15 real estate investment opportunities, including modelling and competitor benchmarking in advanced Excel (Pivot Tables, XLOOKUP), improving pitchbook accuracy by 10%.
- Synthesized portfolio performance and sector risk data into structured decision briefs, providing data-driven support that improved investment recommendations and strategic planning by 12%.
- Built and standardized monitoring records for 20+ REITs with exception-flagging protocols, maintaining data accuracy and reducing due diligence rework by 10%.
- Improved deal-tracking and reporting tools and mentored 3 interns, raising team efficiency by 25% and cutting deliverable turnaround by 20%.

HFCL — Data Analyst Intern Jun 2020 – Aug 2020

- Automated root-cause analysis workflows by modelling 10 manufacturing variables in Python (Pandas, NumPy), reducing defect investigation time by 20%.
- Analysed quarterly production datasets to identify patterns and recommend process changes, increasing production efficiency by 15%.
- Ran QA checks across 100% of monthly parameter datasets, improving data reliability by 10%.

SpiceJet Pvt. Ltd. — Data Analyst Intern Jun 2019 – Aug 2019

- Analysed utilization patterns for 800+ flights across 7 cities using R and Power BI, improving scheduling efficiency by 20%.
- Identified 12 route-level demand trends, quantifying demand signals to improve capacity alignment by 10%.
- Standardized KPI calculations and recurring Excel reports, reducing analysis cycle time by 15%.

PROJECTS

VIP Tires and Services — Retail Market Analysis, Analyst

- Analysed retail sales and market data using Excel, R, and Power BI to optimize sales distribution strategy, contributing to a 15% increase in sales performance.

Yonge Street Mission Program Analysis — Team Lead

- Led a cross-functional team to build a Power BI analytical model for program decision-making and resource allocation, improving operational efficiency by 30% and presenting recommendations directly to the client.

EDUCATION

Northeastern University, Toronto, ON — Master of Science in Analytics
Coursework: Data Analytics, Statistical Modelling, Business Intelligence, Operations Research

Netaji Subhas University of Technology, Delhi, India — Bachelor of Engineering, Mechanical Engineering

SKILLS

Databases & SQL: SQL, Amazon Redshift (data warehousing, view optimization), relational database design, data modelling, ETL pipelines, data cleansing & validation

Visualization & BI: Tableau, Power BI, Excel (Pivot Tables, XLOOKUP, advanced functions), PowerPoint, dashboarding & KPI reporting

Programming & Analytics: Python (Pandas, NumPy), R, statistical analysis, root-cause analysis, data mining

Business & Customer Data: Salesforce CRM analytics, Google Analytics (web/e-commerce analytics), Invoca call tracking, Jira, Agile

Strengths: Data storytelling, translating technical findings for non-technical stakeholders, working with engineers, problem-solving, client communication, attention to detail
